Professional Summary

ADVANCED COMMUNICATION SERVICES, LLC Sept. 2024 – Present
Software Engineer *Manilla, IA*

Full-stack and network engineer who builds, ships, and supports complete production systems, from mobile apps and payment flows to the infrastructure they run on. 2+ years owning custom software end to end, from requirements gathered directly with business owners to a working first release refined through progressive elaboration. Day to day, maintain production apps by fixing bugs, applying security patches and dependency updates, and shipping requested improvements. Experienced with TypeScript, React Native, Node.js, AWS, and SQL, deploying through CI/CD to self-managed Linux servers, with a network engineering background in firewalls, VLANs, and VPNs.

Education

Iowa State University Ames, IA
Bachelor of Science in Software Engineering, Minor in Mathematics – 3.63 GPA *Aug. 2020 – May 2024*

Technical Skills

Languages: TypeScript, JavaScript, Java, SQL, HTML/CSS, C#, C/C++
Frameworks: React, React Native, Next.js, Node.js, Fastify, Express, Spring Boot, Tailwind CSS, .NET MAUI
Databases: PostgreSQL, MariaDB, SQLite, AWS RDS
Cloud & APIs: AWS (Lambda, API Gateway, Cognito, Amplify), Stripe, Square, Twilio, Firebase, ConnectWise
DevOps & Testing: Git, GitHub Actions, CI/CD, Vitest, Jest, Docker, Linux, Nginx, Proxmox, systemd
Networking: UniFi, Cisco Meraki, SonicWall, VLANs, firewall policy, site-to-site and remote-access VPNs

Projects

Wafer's Golf & Social | *TypeScript, Fastify, React, MariaDB, Stripe, Nginx, Proxmox* 2026 – Present
- Built the booking, payment, membership, and door-access platform that runs a golf simulator with no staff
- Charges cards only once the door code reaches the access panel, 2.5s after payment; refunds revoke codes
- Split the backend into a Fastify API and a worker that provisions codes, expires holds, and settles payments
- Shipped a React Native companion app on the App Store with full booking and membership features
- Gated deploys on GitHub Actions CI (155 tests, migration checks) with automatic rollback on failed health checks

The Bakeshop Mobile Ordering App | *React Native, AWS Lambda, Square, Next.js, TypeScript* 2025 – Present
- Replaced a costly third-party ordering service for a local non-profit with an iOS/Android app on both stores
- Wrote 30+ AWS Lambda functions for orders, saved-card payments, loyalty, and menu catalog sync with Square
- Added geofenced and scheduled push notifications designed so the system never stores a user's location
- Built a role-gated Next.js admin portal on Amplify for menus, promotions, sales reports, and push campaigns
- Gave staff an app control center to toggle maintenance mode and force minimum app versions on both platforms

Field Management Platform | *Node.js, Express, React, PostgreSQL, Nginx, Proxmox* 2026 – Present
- Built the in-house portal for clients, billing, and work orders, kept off the internet with AES-256-GCM credentials
- Runs a phone-first field app on its own firewalled VM; the portal pulls from its API, but Field can never call back
- Integrated ConnectWise RMM to import client devices; deployed with zero-downtime webhook CI/CD

ScanBeep Inventory System | *Java, Android, MariaDB, Next.js, TypeScript* 2024 – Present
- Replaced a spreadsheet process that was losing a client's returnable steel shipping frames sent out with seed orders
- Built a Java app for a laser barcode scanner with Code-128 labels, MariaDB, and a Next.js reporting dashboard

PokeDropper (Discord Bot) | *Node.js, discord.js, SQLite, Linux* 2024 – Present
- Grew a weekend project into a 29k-line game with a turn-based battle engine, 131 quests, and trading
- Serves 50+ daily users on a versioned SQLite schema, with game data pre-imported from PokeAPI

Home Lab | *Proxmox, UniFi, Nginx, Docker, Spring Boot, MariaDB, Cloudflare* 2026 – Present
- Sandbox for building and breaking anything: Proxmox VMs on an isolated VLAN with per-service firewall rules
- Self-hosts dgesy.org and a video-sharing platform (Spring Boot, MariaDB, ffmpeg) with webhook auto-deploys
- Exposes only port 443 through Cloudflare and an Nginx reverse proxy, with WireGuard, DDNS, and DNS-01 TLS
